Using Your Access Key

In order to use your Access Key, you'll need to include it in the requests you make to LCBO API. You'll want to peplace `ACCESS_KEY` in the examples below with your actual Access Key shown in the purple box. You can do this in a few ways:

HTTP Authorization Header

This approach is recommended, set the `Authorization` header like this:

```
Authorization: Token ACCESS_KEY
```

URL Query Parameter

LCBO API will also accept your Access Key as a parameter in URLs named `access_key`, add it like this:

```
https://lcboapi.com/products?access_key=ACCESS_KEY
```

Basic Authentication

As a last resort, if you tooling only allows you to specify a username and password for HTTP Basic Auth, you can use your Access Key as the password, and `x-access-key` as the username:

```
https://ACCESS_KEY:x-access-key@lcboapi.com/products
```
